

CLAIMS

1. Cheese dispenser, particularly mature cheese, such as Parmesan-like cheese and the like, characterized in that it comprises a container and a grater arranged to inviolably close the container.
2. Cheese dispenser according to claim 1, characterized in that it comprises trip coupling means between the grater and the container.
3. Cheese dispenser according to claim 1, characterized in that it comprises pushing means in the container, to push the cheese towards the grater.
4. Cheese dispenser according to claim 2, characterized in that grater is rotatably coupled to the container.
5. Cheese dispenser according to claim 3, characterized in that said pushing means comprise a threaded stem, rotationally integral with the grater and a pusher plate threadedly engaged by the threaded stem.
6. Cheese dispenser according to claim 1, characterized in that it comprises an external casing for the container and the grater.
7. Cheese dispenser according to claim 6, characterized in that the external casing comprises a body, in a plastic material of predetermined thickness, and a film of plastic material, arranged to close the body.
8. Cheese dispenser according to claim 7, characterized in that said film is of a multilayer plastic material, with at least a barrier layer.
